THE FACELESS CHANNEL GUIDE

Start a faceless channel. Type one line.

How we make the videos in this reel, start to end: the 1-line setup, the 10 animation commands, how to turn the videos into a channel, and what it takes to get paid.

1 What you need
2 Setup in 1 line
3 Make your first video
4 The 10 commands
5 Polish: voice, music, captions
6 Turn it into a channel
7 Getting paid
8 30 video ideas, ready to type
9 If something breaks

@maddiee.makess · Nov 2026 · Full commands:
madhureddy18.github.io/ai.jugaadd/p/animate

1 What you need

No camera, no face, no editing app. Just a laptop.

A computer — Mac, Windows or Linux. Any laptop from the last few years is fine.

Claude Code — Claude's coding tool that runs in your terminal. It comes with a paid Claude plan. Install it from **claude.com/claude-code**, then type `claude` in a terminal to start it.

Node.js 18 or newer — free, from **nodejs.org**. The videos are built with **Remotion**, a free tool that turns code into an .mp4. Claude installs Remotion for you the first time.

About 15 minutes for the first video (most of it is the first-time install). After that, a video takes a few minutes.

How it works in one line: each command is a "skill" — a short instruction file that tells Claude exactly how to script, animate and render one style of video. You type the command + your topic, Claude does the rest and hands you the .mp4.

2 Setup in 1 line

Mac / Linux

Open Terminal, paste this, press Enter, then restart Claude Code:

```
mkdir -p ~/.claude/skills && curl -sL
https://madhureddy18.github.io/ai.jugaadd/p/animate/animate-commands.zip -o /tmp/animate.zip &&
unzip -o /tmp/animate.zip -d ~/.claude/skills
```

Windows

1. Download the zip: madhureddy18.github.io/ai.jugaadd/p/animate/animate-commands.zip
2. Unzip it into `C:\Users\YOUR-NAME\.claude\skills` (make the folder if it isn't there).
3. Restart Claude Code.

Check it worked

In Claude Code, type `/` — you should see `/zack-d-films`, `/kurzgesagt`, `/ted-ed` and the rest in the list.

3 Make your first video

This is exactly what happens on the phone in the reel.

1. **Make an empty folder and open Claude Code in it.**

```
mkdir my-channel && cd my-channel && claude
```

2. **Type one line: a command + your topic.**

```
/zack-d-films what happens when you crack your knuckles
```

3. **Let Claude work.** It checks the facts with a web search, writes a 30–45 second script (`script.md`), sets up Remotion, builds the animation scene by scene, previews key frames to catch mistakes, then renders. Say "yes" when it asks to install or run something.

4. **Get your video.** It lands in `out/zack-d-films.mp4` — vertical 1080×1920, 30 fps, ready for Reels and Shorts.

5. **Change anything in plain words.** Then ask it to render again.

```
make it slower · bigger captions · add one more surprising fact
change the background to dark blue · make the ending punchier
show the number 1.3 million bigger and in yellow
```

6. **Preview without a full render** (optional, faster):

```
npx remotion studio
```

   This opens a live preview in your browser where you can scrub through the video.

> **Better results:** be specific in your one line. "what happens to your body if you stop sleeping for 3 days" beats "sleep". One clear question = one clear video.

4 The 10 commands

The 3 from the reel are marked ★. One style per channel works best.

Command	What you get	Try
`/zack-d-films` ★	Clay-style 3D "what happens if..." about the body and science; camera goes inside the body	what happens when you crack your knuckles
`/kurzgesagt` ★	Flat, colourful space and science explainer with big numbers	how big is the Sun
`/ted-ed` ★	Storybook, hand-drawn style explainer for history and science	the deepest point in the ocean
`/infographics-show`	Cartoon-character story explainer ("what if...", life stories)	what if you lived on the Moon for a year
`/scale`	True-to-scale size comparisons	biggest animals ever, smallest to largest
`/deep-dive`	Depth or height journey with a live meter	how deep humans have gone into the ocean
`/data-race`	Animated bar-chart race over time	most populated countries 1950 to 2025
`/map-history`	Animated maps: empires, borders, routes	how the Mughal Empire grew
`/3blue1brown`	Math explained with moving shapes and equations	why 0.999... equals 1
`/whiteboard`	Hand-drawn whiteboard, draw-as-you-explain	how a credit score works

About the names: the styles are *inspired by* famous channels so you know the look. The commands never copy their names, logos, characters or music — and you shouldn't either. Your channel needs its own name and look.

Make your own command

Each command is just a text file at `~/.claude/skills/<name>/SKILL.md`. Copy one, rename the folder, and change the "Style rules" section — colours, fonts, pace, caption style. Now your channel has a signature look nobody else has.

5 Polish: voice, music, captions

The commands give you a finished animation with captions. These turn it into a video people watch to the end.

Voice-over

- **Your own voice** — record the script on your phone in a quiet room. Fastest and most original.
- **AI voice** — use any text-to-speech app; OmniVoice is a free one that runs on your own computer with no API key.
- Then tell Claude: `add voice.mp3 as the voice-over and time each scene to it`. Put the file in the project's `public/` folder first.

Music and sound

- Use royalty-free tracks (YouTube Audio Library, Pixabay Music) or add trending audio in the Instagram/YouTube app when posting.
- Small sound effects (pop, whoosh, ding) on the big moments make a huge difference: `add a pop sound when the bubble bursts`.

Captions that hold attention

- Max ~6 words on screen, bottom third, thick outline. The commands do this by default.
- Highlight one key word per line in yellow: `highlight the numbers in yellow`.

The hook (first 2 seconds)

Most people decide in 1–2 seconds. Start with the question or the most shocking frame, never with an intro.

Weak
"Today we're going to learn about knuckles."

Strong
"What actually POPS when you crack your knuckles?"

6 Turn it into a channel

1. **Pick one niche and one style.** Body facts in Zack D style. Space in the Kurzgesagt style. History on maps. Viewers follow a channel because they know what they'll get next.
2. **Give it a name and look that's yours.** A short name, one colour scheme, one font, the same intro frame style. Edit the command's style rules once and every video matches.
3. **Post consistently.** 1 video a day if you can, at least 3–4 a week. Make a batch of 5–7 on the weekend.
4. **Post the same video on YouTube Shorts and Instagram Reels.** Same file, two audiences. Remove any platform watermark.
5. **Title = the question.** "What happens if you don't sleep for 3 days?" Captions: 1 line + 3–5 hashtags for the niche.
6. **Read your numbers weekly.** Look at which videos people watched to the end and make more of those topics. Drop topics that people swipe away from.
7. **Series win.** "Part 2" videos, "your body on...", "what if..." — a series gives people a reason to follow.

> **Weekly plan:** Sunday — pick 7 topics + make 7 videos (about 2 hours once you're set up). Mon–Sun — post one a day at the same time, reply to the first comments.

7 Getting paid

Faceless channels do get paid — but only when they grow and only when the videos are original. Here's the honest picture.

YouTube (Partner Program)

When	To join (new channels)
Now (until 31 Jan 2027)	1,000 subscribers + either 4,000 public watch hours in 12 months **or** 10 million Shorts views in 90 days
From 1 Feb 2027	8,000 watch hours in 365 days **or** 20 million Shorts views in 90 days (no subscriber minimum). Shorts ad revenue needs 10 million Shorts views in the last 90 days.

Source: YouTube's announced changes, as reported in Aug 2026. Rules change — check YouTube Studio → Earn for your channel's current status.

Other ways faceless channels earn

- **Brand deals** — apps, ed-tech, gadgets pay for a mention once you have steady views. Often the biggest income for niche channels.
- **Instagram** — bonuses and gifts where available in your country, plus brand collabs.
- **Your own product** — a guide, template or course in your niche, linked in bio.
- **Affiliate links** — books, gadgets, tools related to your videos.

Don't get demonetised: YouTube doesn't pay for mass-produced, repetitive or reuploaded content. Make every video different: your own script angle, verified facts, your own voice or edits, your own channel style. The commands give you the animation — the idea and taste must be yours.

8 30 video ideas, ready to type

Command	Copy, paste, go
`/zack-d-films`	what happens when you hold in a sneeze what happens to your body after drinking 5 cups of chai why your stomach growls
`/kurzgesagt`	what if the Moon disappeared how big is a black hole compared to Earth how long would it take to walk to the Sun
`/ted-ed`	how the pyramids were really built why the ocean is salty the story of the first vaccine
`/infographics-show`	what if you lived on Mars for a year a day in the life of an astronaut what if humans could breathe underwater
`/scale`	tallest buildings in the world, side by side planets from smallest to biggest how small is a virus
`/deep-dive`	how deep is the Mariana Trench what's inside the Earth, layer by layer how high can a plane, a bird and a balloon go
`/data-race`	biggest economies 1960 to 2025 most followed people on Instagram over time India's population vs China 1950 to 2025
`/map-history`	how the British East India Company took India the Silk Road route how the Roman Empire rose and fell
`/3blue1brown`	why 0.999... equals 1 how compound interest grows money why the area of a circle is πr^2
`/whiteboard`	how a credit score works how UPI sends money in 2 seconds why you should start investing at 20

Facts change — Claude checks them with a web search before using any number, but give the script a quick read before you post.

9 If something breaks

Problem	Fix
The `/command` doesn't show up	Check the folder: `~/.claude/skills/zack-d-films/SKILL.md` must exist. Restart Claude Code.
`npx: command not found`	Install Node.js 18+ from nodejs.org, then open a new terminal.
Render fails downloading a browser	Your network blocked it. Try another Wi-Fi, or tell Claude: `render using my installed Chrome`.
Text is cut off or too small	Say: `check every frame for cut-off text and make captions bigger`.
Video is the wrong size	Say: `make the composition 1080x1920 at 30fps`.
It looks too simple	Ask for more: `add camera moves, depth, shadows and one big wow moment`.
Render is slow	Normal for 3D styles — a 40 s video can take a few minutes. Close other apps.
A fact looks wrong	Say: `double-check the numbers with sources and fix the script`.

The one rule: if you can describe it, you can ask for it. Claude edits the code; you just say what you want to see.
