@ai.jugaadd

300 applications. 0 calls. Same here.

Hi, I'm Maddie. After B.Tech I applied to every job on Naukri with the same resume. Nothing. Not even a rejection mail. Then I figured out what was going wrong, and this is everything I learnt. Bas 2 minutes per job.

So why zero calls? Before any human sees your resume, a software called **ATS** reads it and checks if it has the words from the job post. Same resume for 300 different jobs = it matches none of them properly. One job, one resume. That's it, that's the secret.

The prompt I use

copy this exactly

```
You are a senior recruiter for Indian tech and analytics companies, and an ATS (Applicant Tracking System) expert. I am a fresher applying for the job below. Help me tailor my resume for THIS job only.

Step 1 - Ask first: if any of my resume points are missing numbers (users, rows of data, time saved, accuracy, marks, team size), ask me up to 5 short questions to get the real numbers before you rewrite. Wait for my answers.

Step 2 - Keyword check: make a table of the important skills, tools and keywords from the job post. For each one, mark: already in my resume / missing but I might have it (ask me) / missing.

Step 3 - Rewrite: rewrite every bullet point as: action verb + what I did + tool used + result with a number. Max 2 lines each. Use the job post's exact words where they are true for me.

Step 4 - Summary: write a 2-line summary for the top of my resume that uses the exact job title from the post.

Step 5 - Skills: rewrite my skills section in plain words, most relevant to this job first.

Step 6 - Final resume: give me the full resume as plain text in one column, with these headings: Summary, Skills, Projects, Experience/Internships, Education, Certifications. ATS-friendly: no tables, no icons, no photos.

Step 7 - Score: give my resume a match score out of 100 for this job, before and after your changes, and tell me the top 3 things still missing.

Step 8 - Interview prep: list 5 questions the interviewer will most likely ask from this resume, with short answers based only on my real experience.

Strict rule: NEVER add any skill, tool, project, internship or number I don't have. If something important is missing, tell me what it is and how I can learn it in 2 weeks for free. I will be asked about every line in the interview.

JOB POST:
[paste the full job description here]

MY RESUME:
[paste your resume text here]
```

Write points that actually get calls

action word + what you did + which tool + result with a NUMBER

No numbers? Use scale: how many users, rows, files, people, days saved, or your CGPA / rank.

Before vs after

Worked on Python.	**Built a Python script that cut weekly report time from 2 hours to 10 minutes.**
Did a project on machine learning.	**Trained a model on 12,000 loan records with 87% accuracy and put it live using FastAPI.**
Good knowledge of SQL.	**Wrote 30+ SQL queries to build a Power BI sales dashboard for our college fest.**
Team player.	**Led a team of 4 and finished our final-year project 2 weeks early.**

Keep it ATS-friendly

- One column. No tables, boxes or two-column Canva designs
- Normal headings: Summary, Skills, Projects, Experience, Education
- Simple font (Arial / Calibri), size 10 to 12
- Skills as plain words: Python, SQL, Power BI, Excel
- No photo, icons or those skill-rating bars
- 1 page is enough for a fresher
- Use the exact job title from the post in your summary

Please don't do this

- ✗ Same resume for every single job
- ✗ "Seeking a challenging role in a reputed organisation"
- ✗ Skills you can't explain for 2 minutes
- ✗ Typo in your own email or phone number
- ✗ No GitHub or LinkedIn link
- ✗ Fake internships. HR checks. It ends badly.

How I use it (2 minutes)

1. **Copy the full job post** from Naukri, LinkedIn or the careers page
2. **Copy your resume text** (open PDF, Ctrl+A, Ctrl+C)
3. **Paste both into the prompt** and answer its questions about your numbers
4. **Check every line is true**, then save as Name_Company_Role.pdf

Next up: interview prep in 10 minutes

Follow @ai.jugaadd so you don't miss it. All the best yaar, you got this!
