300 applications. 0 calls?

Fix your resume for every job in 2 minutes — the exact prompt from the reel.

Why you get zero calls

Most companies run every resume through an **ATS** (Applicant Tracking System) before a human sees it. It scores how well your resume matches the **words in the job post** — skills, tools, job title. Send the same resume to 300 different jobs and it matches none of them well. **One job = one tailored resume.**

The prompt (copy exactly)

```
Here's a job description and my resume.

1) List the important skills and keywords in the job post that are missing from my resume.
2) Rewrite my resume bullet points to match this job, using numbers from my real work (time saved, users, accuracy, marks, project size).
3) Do NOT add any skill or experience I don't have. If something is missing, tell me instead of inventing it.
4) Write a 2-line summary for the top of my resume for this role.
5) Give me the final resume text, ready to copy.

JOB POST:
[paste the job description here]

MY RESUME:
[paste your resume here]
```

How to use it — 5 steps

1. **Copy the job post.** From Naukri, LinkedIn or the company site. Copy the whole thing, including "requirements".
2. **Copy your resume text.** Open your PDF, select all, copy. Plain text is fine.
3. **Paste both into the prompt.** Open Claude (or any AI chat), paste the prompt with both filled in, and send.
4. **Check every line.** Read it like an interviewer. If a line is not 100% true, delete it.
5. **Save a new PDF per job.** Name it **YourName_Company_Role.pdf**, e.g. Madhu_Deloitte_DataAnalyst.pdf.

Follow-up prompts that help even more

- "Now give me 5 interview questions they will ask from this resume, with short answers from my real experience."
- "Which 3 missing skills from this job can I learn in 2 weeks? Give me free resources."
- "Write a 4-line message to the recruiter on LinkedIn for this role."
- "Make my project section stronger. Here are my projects: [paste]. Keep it truthful."

Golden rule: only true things. If the AI adds a skill you don't have, learn it or remove it — interviewers ask about every line on your resume.

Make your resume ATS-friendly

Format rules, the bullet formula, and real before/after examples.

The bullet formula

Action verb + what you did + tool/skill + result with a number.
No real number? Use scale: how many users, rows, files, team members, days saved, or your marks/rank.

Before → After

✗ Worked on Python.	✓ Built a Python script that cut weekly report time from 2 hours to 10 minutes.
✗ Did a project on machine learning.	✓ Trained a Random Forest model on 12,000 loan records, reaching 87% accuracy; deployed it with FastAPI.
✗ Good knowledge of SQL.	✓ Wrote 30+ SQL queries (joins, window functions) to build a sales dashboard in Power BI for a college fest.
✗ Team player.	✓ Led a 4-member team to finish the final-year project 2 weeks before the deadline.

ATS format rules

- Single column. No tables, text boxes or two-column templates.
- Standard headings: Summary, Skills, Experience, Projects, Education, Certifications.
- Use simple fonts (Arial, Calibri), size 10–12.
- Save as PDF unless the job asks for .docx.
- Put skills as plain words: "Python, SQL, Power BI, Excel".
- No photos, icons, graphics or skill-rating bars.
- 1 page for freshers. 2 only if you truly have more.
- Copy the exact job title from the post into your summary.

Strong action verbs

Built · Developed · Automated · Designed · Analysed · Optimised · Reduced · Increased · Led · Created · Deployed · Cleaned · Visualised · Migrated · Implemented · Tested · Improved · Delivered

Mistakes that kill calls

- Same resume for every job.
- Objective statements like "seeking a challenging role".
- Listing skills you can't explain in an interview.
- Typos in your email or phone number.
- Fancy Canva templates the ATS can't read.
- No links: add GitHub / LinkedIn / portfolio.

Before you hit apply — checklist

- ☐ Keywords from the job post are in my resume (only the true ones).
- ☐ Every bullet starts with an action verb and has a number.
- ☐ Summary mentions the exact job title.
- ☐ File name: Name_Company_Role.pdf
- ☐ Phone, email, LinkedIn and GitHub are correct and clickable.
- ☐ I can talk for 2 minutes about every line.
